

ABSTRACT OF THE DISCLOSURE

5 A mail retrieval system for allowing a user to limit exposure
to the elements while retrieving mail. The mail retrieval system
includes a support assembly extending between a curb and a house.
A mail receiving member is coupled to the support assembly
whereby the mail receiving member is selectively transported along
10 the support assembly. The mail receiving member is designed for
receiving mail. The mail receiving member permits a user to
retrieve the mail when the mail receiving member is transported
along the support assembly to be positioned proximate the house.
A drive assembly is coupled to the support assembly. The drive
15 assembly is operationally coupled to the mail receiving assembly
for transporting the mail receiving member along the support
assembly when the drive assembly is actuated by the user to allow
the user to retrieve the mail in the mail receiving box without
having to walk to the curb.
